

OBJECTIVES OF INDIAN ASSOCIATION FOR MEDICAL INFORMATICS

Call for Medical & Computer Professionals Become a Member of I.A.M.I. and Enhance Your Status

The following aims and objectives have been drafted for the benefit of giving guidelines while enlisting new members in the association and for the Office Bearers, Executive Committee Members and Life Members of the IAMI for their functioning:

1. To develop computer awareness in people of Medical Profession (including Dental, Nursing and Pharmacy) and Administrative Medical Authorities through lectures, seminars workshops, exhibitions and demonstrations of medical software in all parts of country and impress upon all the concerned on the necessity and benefits of various computer applications in Medicine, Health and Hospital Services.
2. To give necessary assistance and guidance to develop collaboration with those who are interested in developing equipment / software for enhancement of professional efficiency of doctors, nurses and paramedical technicians and any software for the benefit of patients, betterment of hospital services and for improving administrative functions in Health Services of States and Central Government as well as local bodies like Municipalities & Corporations.
3. To help organizations, hospitals, institutions, health & hospital administrators who are life members of I.A.M.I. to identify their health and administrative problems that can be solved through computerization and pass them on to Information Technology companies (both software and hardware) for a solution.
4. To make all the required efforts to introduce computer education in all the colleges of medical sciences, dental sciences, nursing and pharmacy in India at both UG and PG levels through MCI (Medical Council of India) and respective University Authorities.
5. To make all the efforts to improve the medical, dental, nursing and pharmacy colleges in their educational and training methodologies through computer-aided techniques and computerized library information services.
6. To assist government / public / private hospitals, nursing homes & clinics and other organizations / institutions / establishments having their own hospitals / dispensaries in planning, procurement and installation of hospital computer systems including computer-based medical instruments & equipment and other health related software through standard companies at reasonable rates through life membership in the association.

7. To suggest improvements in the existing services and computer systems if approached by any hospital / nursing home / clinic / organization / establishment / institution / laboratory / dispensary / pharmaceutical company and find suitable software & hardware firms to do that job in an internationally standard design.
8. To develop collaboration links with other countries, other national and international organizations / associations / societies / institutions and software companies for software development, knowledge base creation, software exchanges, bibliographic references etc.
9. To assist in development and employment of medical manpower for medical informatics in Indian hospitals / medical institutes / medical organizations and pharmaceutical companies.
10. To help India to achieve high international standards through standardization in all the hospital procedures, including patient care, medical documentation, health statistics, computer-based medical instruments, patient monitors and other hospital equipment.
11. To conduct periodic professional conferences at national level in medical informatics and periodic conferences / seminars / workshops at regional level to keep the members of IAMI abreast of concerned technologies involving computers and information sciences related to medical and allied fields.
12. To bring out periodical news bulletins, Indian Journal of Medical Informatics and proceedings of the conferences to encourage members of IAMI in professionalism, research, innovations, publications and knowledge sharing.

President, I.A.M.I.
